EMPLOYMENT HISTORY

Varian Medical Systems Software engineer Level 2

Pune, Maharashtra
July 2018 - Present

Angular Js and Angular 6 (Hybrid app)

Halo 360 product

- **Referral Management** : One cancer hospital can transfer patient to another hospital with all associated care team members.
- **User and staff facilities** : Assigning and managing all the staff facilities and converting users to staff.
- **Admin roles and rights** : Preventing admin and other users from unauthorized access and displaying respective areas.
- **Azure monitoring** : Worked on adding analytics to the client portal with Azure monitoring.

React-redux

- **Patient portal** : Managing patient view and related functionality like profile, allergies, assigned physician and relative data.

Angular JS :

- **Document Management (Product Activation)** : Document Management is one of product available to clients, To activate this product user has to visit prospect portal. The prospect portal is built in Angular JS.
- **Bulk rent type management** : This project has all the functionality of managing rent types in bulk. The front end was in Angular Js and back-end was in PHP and Postgres.

Angular 5:

- **Message Center** : This product was created to manage all the scheduled emails, merge fields and email management. The front end technology used is Angular Js and backend developed in php and postgres.

React:

- **Transformation of front-end to react** : Many of the products of the company are in smarty-php stack. The organization wants to switch to react-php just like the Facebook. There I have received training by react professionals and also got opportunity to transform smarty based templates to react.

Javascript, JQuery and php

- More than 5 client websites built with technology stack of Javascript, JQuery and php.
- Worked on websites including e-commerce, informative, blogs and product portfolios.
- Got star performer 2015 .
